

MOTONGORI HARRIET JOSEPH

Data & Business Analyst | Quality & Customer Analytics | MSc Data Science Candidate

Nairobi, Kenya | harriet.joseph35@gmail.com

linkedin.com/in/harriet-joseph-5669b921b | github.com/HattieSpartan | hattiespartan.github.io

PROFILE

Analyst with 19 months in a high-volume, KPI-driven customer operations environment, promoted to Quality Analyst in under three months. Audited 50–60 customer interactions a day, took ownership of customer-dissatisfaction (DSAT) analysis, and produced the reporting used to steer a team of 23–25 agents. BSc Actuarial Science; MSc Data Science candidate researching machine-learning methods for insurance claims reserving. Works in Python, SQL and Excel, and cares most about turning data into decisions people actually act on.

SKILLS

Analysis & reporting: Excel (pivot tables, dashboards, scorecards), Power BI, Tableau, KPI tracking, root-cause and Pareto analysis

Programming & data: Python (pandas, NumPy, scikit-learn, Matplotlib), SQL, data cleaning and validation, exploratory analysis

Modelling: regression, classification (logistic regression, decision trees, random forest, SVM, Naive Bayes), collaborative filtering, cross-validation, model evaluation

Deep learning & data engineering: TensorFlow/Keras (CNNs, LSTMs), NLP and text preprocessing, Streamlit; PySpark, Hadoop (HDFS, YARN), Apache Flume, PostgreSQL, Parquet, ETL

Tools & practice: Zendesk, Snowflake, Git, Rasa; SOP writing, quality calibration, stakeholder reporting, coaching

PROFESSIONAL EXPERIENCE

Quality Analyst — CCI Kenya (Whatnot campaign)

Sep 2024 – Dec 2025

Nairobi | Email-based customer support for a live-shopping marketplace client

- Audited 50–60 inbound and outbound customer emails a day against campaign quality standards, as one of six QAs covering 23–25 agents.
- Tracked agent QA score (target 85%) and CSAT (target 90%); used root-cause analysis to find the defect drivers behind bottom-quartile performance (below ~75–80% QA) and targeted coaching at them, helping bottom-quartile agents improve by month end.
- Took ownership of DSAT (customer dissatisfaction) analysis beyond the QA remit, breaking down why customers rated interactions poorly and feeding the findings into coaching and process fixes.
- Took on data reporting normally owned by the QA lead: built pivot-table dashboards and reports used daily and weekly by the QA lead, and presented findings to the campaign's senior manager.
- Turned recurring defect patterns into agent cheat sheets, training content and SOP revisions where instructions were causing confusion.
- Took part in weekly calibration with the client's QA team and with team leads and subject-matter experts, keeping scoring consistent across reviewers.

Customer Service Representative — CCI Kenya (Whatnot campaign)

May 2024 – Sep 2024

- Resolved 60–70 customer emails a day while consistently meeting QA score and CSAT targets.
- Learned SOPs and product detail ahead of shifts to work faster and more accurately, leading to promotion to Quality Analyst in under three months.

Data Analytics Intern — MeriSkill (remote)

Sep 2023 – Oct 2023

- Cleaned, explored and visualised datasets in Python and SQL, and presented findings in short written reports.

RESEARCH

MSc thesis (in progress) — KCA University

2026 – 2027

- A Comparative Evaluation of Classical Actuarial and Statistical Learning Methods for Claims Reserving in Kenyan Short-Tail General Insurance. Concept paper submitted September 2026; research in progress.

PROJECTS

QA Root-Cause Analysis — CCI Kenya, supporting the QA Team Lead *Python (pandas), Matplotlib* | [GitHub](#)

- Analysed ~7,500 QA audits across the Kenya and Rwanda sites by week, tenure band, contact reason and QA parameter to find where quality was breaking down.

- Found a mid-tenure dip (Kenya agents at 60–90 days averaged 82.8% vs 89.4% after 90 days), a June decline at the Rwanda site, and that six defect types, led by incorrect contact reasons and skipped macros, caused 70% of defects; built bottom-quartile agent lists to target coaching.

Movie-Review Sentiment Analysis with an LSTM *Python, TensorFlow/Keras, Streamlit* | [GitHub](#)

- Cleaned and tokenised 50,000 IMDB reviews and trained an embedding + LSTM network to classify sentiment, reaching 88% test accuracy.
- Saved the model and tokenizer and wrapped them in a Streamlit app that scores any review typed in, with a confidence value.

Scene Image Classification with a CNN *Python, TensorFlow/Keras* | [GitHub](#)

- Trained a convolutional neural network to classify ~17,000 images into six scene types, improving test accuracy from 76% to 81% over successive iterations; tested data augmentation and used per-class F1 (0.70–0.95) to trace errors to look-alike classes such as buildings vs streets.

End-to-End Big-Data Pipeline *Flume, Hadoop HDFS, PySpark, PostgreSQL*

- Set up Hadoop, Spark and Flume on Linux (WSL) and built a pipeline that ingests raw tweets into an HDFS data lake, cleans and normalises them in PySpark, and loads 219,294 records into a PostgreSQL warehouse over JDBC, verified with SQL.
- In a four-person team, built a second PySpark pipeline for Netflix titles data with data-quality rules, writing compressed Parquet partitioned by content type.

Also: SyriaTel churn prediction comparing four classifiers ([project](#)); Bella, a Rasa wellness chatbot ([project](#)); a Naive Bayes spam classifier coded from scratch, 96.8% test accuracy ([GitHub](#)); a collaborative-filtering movie recommender ([project](#)).

EDUCATION

MSc Data Science — KCA University

Sep 2025 – Nov 2027 (expected)

BSc Actuarial Science — South Eastern Kenya University

2022

Statistics, probability, risk and financial mathematics. Treasurer, SEKU Actuarial Students Association (2021–2022): managed the association's budget and financial reporting.

Certificate in Data Science — Moringa School

2023

REFEREES

Available on request.
